

Tabago, Marc Alexis M.  
TV09

This subject "Specialized English Program" gave me knowledge of different skills that I can apply for my personal growth and education. It helped to enhance my comprehension and critical reading which is also important in the field of engineering. This also improves my grammar and construction of sentences which are my weaknesses.

One of the main lessons in this course is the development of the comprehension of one person. By reading articles and texts, I can improve my awareness of what is being said in a text. I also practiced my observation to identify the key points of one text.

Another lesson aside from the development of comprehension is speaking skills. This particular skill is where I am weak. This lesson helped me a lot as it teaches active listening, allowing me to deeply understand the factors in communication.

This program also sharpens my ability to think critically. It provides the exercises needed by one student to precisely analyze the ideas in a certain text. This focused on problem-solving skills and this is much needed in engineering courses.

Lastly, this course increased my understanding of the necessary skills on how to effectively use it. It offered training to students to continuously grow for their future. It builds the foundation for us to have a successful career path.
